Education

B.S. Computer Science, Southern New Hampshire University *Expected 2027*

Relevant Coursework: Databases, Python, Discrete Math

Club: CodeUnited

A.S. Computer Engineering Technology, Hillsborough Community College *July 2025*

Research: Developed push-button automotive starter for classic cars under Prof. Tracy Barnes

Relevant Coursework: Advanced Microcontrollers, Total Computer Systems, Circuit Design

Thinkful (Chegg Skills) — Cybersecurity Program *2024*

Comprehensive training in computer systems, networking, and applied security engineering.

Training in computer systems, networking, and applied security engineering.

Relevant Coursework: OS fundamentals, network administration & security, cryptography, access control, application security, threat intelligence, incident response, and vulnerability management.

Experience

Electronics Technician (Contract), Xonar Technology *St. Petersburg, FL — Mar-Aug 2025*

- Supported industrial electronic systems across development and production, contributing to on-time project delivery.
- Improved firmware flashing throughput from 3→15 units/week via optimized processes, reducing technician error rate by 60%.
- Authored TruePort® upload and troubleshooting manual, accelerating onboarding for new technicians by 50%.
- Collaborated with engineers to debug consumer-facing systems, enhancing system reliability and reducing production software bugs.

Embedded Systems Developer *Freelance & Academic — 2021-Present*

- Developed firmware for motor control and LED signaling systems using PIC microcontrollers in C, achieving precise timing and safe operation.
- Implemented UART, SPI, and PWM communication for sensor-actuator systems, optimizing performance and responsiveness.
- Designed PCB layouts and tested hardware integration for multiple embedded projects.

Projects

Brighterspace+ Chrome Extension (In Dev.) *TypeScript, React, Node.js, PostgreSQL — Sept 2025-Present*

github.com/ReavesX/brighterspace

- Building a productivity-focused Chrome extension enhancing Brightspace/D2L UX with offline-first task management.
- Implementing Yjs CRDT sync and GraphQL backend for encrypted multi-user collaboration, ensuring data consistency.
- Architecting a privacy-first data model and deploying CI/CD pipeline via AWS Lambda for rapid iteration and deployment.
- Conducting unit and integration testing to maintain high code reliability during active development.

Canvas Quiz AI Demo Extension *JavaScript — Aug 2023-Mar 2025*

github.com/ReavesX/Canvas-Quiz-OpenAI-Answerer

- Built at request of HCC faculty to demonstrate AI-based quiz parsing for assessment security research.
- Showcased real-time AI response generation and responsible mitigation design, improving assessment prototyping.
- Implemented modular architecture for easy extension and maintenance.

Skills

Languages: C (Advanced), Python (Intermediate), TypeScript (Basic), SQL (Intermediate)

Frameworks / Tools: Node.js (Basic), React (Basic), Docker (Basic), AWS (Basic), Git (Intermediate)

Microcontrollers/SBCs: PIC16F877A/84A, STM32, Raspberry Pi Pico

Hardware: UART, SPI, I²C, PWM, PCB assembly, circuit design
